(54) OPTICAL DISK

(57)Abstract:

PURPOSE: To obtain an optical disk having high reliability and stability by forming an insulating film and recording film on a resin substrate on which guide grooves or the guide grooves and information for sectors are provided, then forming a reflecting film and protective film thereon.

CONSTITUTION: The spiral guide grooves 12, the insulating film 13 constituted of silicon oxide SiO_2 , the recording film 14 of a cyanine dye, the aluminum Al reflecting film 15, and the protective film 16 consisting of a UV curing type resin are formed in this order on the resin substrate 11 made of polycarbonate PC. As a result, the optical change of the recording film 14 having a small contrast is covered by the reflecting film having a high reflectivity. The optical disk which has the high stability and reliability and permits erasing is thereby obt.

LEGAL STATUS

[Date of request for examination]
[Date of sending the examiner's decision of rejection]
[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]
[Date of final disposal for application]
[Patent number]
[Date of registration]
[Number of appeal against examiner's decision of rejection]
[Date of requesting appeal against examiner's decision of rejection]
[Date of extinction of right]
